Nexamp Hosts Community Solar Information Session for Residents in the Somonauk Area

October 29, 2019 – A new community solar farm under construction in Somonauk is providing an opportunity for area residents to subscribe at no cost to a share of a local solar farm and lower their electricity costs without having to install solar panels. Project developer Nexamp is hosting an informational meeting on November 4th to provide an overview of how community solar works and answer any questions.

- Somonauk Community Solar Information Session
- Monday, November 4th at 4:00pm, Village Board Room in Village Hall
- 131 S. Depot Street, Somonauk
- Community solar presentation, open Q&A

The new community solar farm in Somonauk will add 2 MW of clean energy to the ComEd grid, enough to power more than 200 average homes. By attending the public information session and bringing a current ComEd bill, eligible residents can enroll in the program with no upfront cost and no long-term commitment.

Nexamp's farm is part of Illinois' community solar initiative, which allows residents to subscribe to a share of a local solar farm and support clean energy without having to install rooftop panels. This makes the benefits of solar more accessible, because many people may not have a roof suitable for solar panels, may rent their home or apartment, or may not have the resources to purchase solar panels. Subscribers earn credits on their electrical utility bill for the energy produced by their solar farm share, and Nexamp offers a 20% discount on these credits.

With more than a decade of experience in the market and dozens of community solar projects in operation or under construction around the country, Nexamp is quickly becoming a leader in community solar. "With the Illinois mandate for 25% renewable energy by 2025, community solar is poised to make a significant contribution in generating capacity," notes Zaid Ashai, CEO, Nexamp. "By subscribing to a local solar farm, residents are helping to enable the growth of more clean energy while taking advantage of potential savings. We look forward to sharing more information about this new opportunity during the information session."

For more information or to check eligibility, residents should visit www.SolarforIL.com.

About Nexamp

Nexamp is leading the transformation to the new energy economy with proven solutions for the deployment and operation of solar and energy storage assets. Our comprehensive capabilities span the entire solar project lifecycle—from project development, design and construction, through financing, operations and maintenance. Our integrated, best-in class solutions make solar and energy storage simple and profitable for our clients and partners and make an impact every day. With a rapidly expanding network of property owners, businesses, communities and residents benefitting from our

growing portfolio of solar and energy storage assets across the US, Nexamp and our partners are laying the groundwork for a cleaner, more secure energy future. Visit us at www.nexamp.com.
